

# SlideMop™

## Simple, Effective Cleaning System

The SlideMop™ is a simple, effective mopping system that can be used in the traditional "dip and wring" method or as a "charging" method where liquid disposal and/or space saving is an issue.

The sturdy, collapsible plates – available in both Plastic and Electropolished Stainless Steel – slide into the polyester mop head. The mop easily swivels to ensure correct lift and pull or figure 8 cleaning techniques.

Quilted mop head design holds and distributes cleaning agents effectively.

With a lightweight, economical design, the SlideMop can be used throughout the facility from unclassified work areas to the sterile core.

A versatile template, it can be used with a selection of Micronova hardware and accessories for the ultimate in critical cleaning.

### Features:

- Choice of Stainless Steel or Plastic Frame
- Use with W-94 or W-92 wringer
- Both mop frames accept most threaded plastic and aluminum handles. Quick disconnect stainless steel handles can be used with an ACME adapter.
- Robust mop construction, can be laundered and autoclaved multiple times.
- Available gamma irradiated and non-irradiated.

## SPECIFICATIONS

### Materials of Construction:

#### Frames & Swivel Joints

Plastic Plate: Polypropylene

Swivel: Polypropylene

Stainless Steel: 304 Electropolished

Swivel: Polyketone

#### Covers

100% smooth knit polyester with polyester pad interior

Plastic Frame

Stainless Steel Frame

### Additional Specifications

#### Volume for

Pre-Saturation: 250 mL per mop

#### Dimensions:

Frames: 5 x 16 in

Covers: 5.5 x 16 in

- Manufactured for use in Controlled Environments
- ISO 5 thru 9 Cleanrooms
- ISO 9001 Certified Manufacturing Facility
- Autoclavable
- Good chemical resistance
- Gamma Irradiation: 25 kGy minimum dose
